

LABORATORY TASK REPORT 01

Environment Isolation, Modern Flet GUI & Collaborative 3-Developer Git Workflow

Group Designation:	Group No. [6-Fries]
Date of Submission:	[Month DD, 2026]
Course Instructor:	Engr. Allan Ibo Jr. CSPC College of Computer Studies

TEAM TRIAD MEMBERS & TECHNICAL ROLES

Student Full Name	Student ID	GitHub Username	Assigned Triad Role & Branch
[Visitacion, Princess Shayla B.]	2411291	prvisitacion-ayaa	Developer 1 (Lead UI) feature/dev1-profile
[Villazer, Devine Grace]	2411290	devillazer-ui	Developer 2 (State Logic) feature/dev2-state
[Nomo, Micabelle Allison]	2411277	elmicaly	Developer 3 (QA & Milestone) feature/dev3-features

Section 1: GitHub Repository & Collaborator Proof

Public GitHub Repository URL:

<https://github.com/prvisitacion-ayaa/cccs106-group06-showcase>

Proof of team collaboration setup on GitHub. The screenshot below shows the repository Settings > Collaborators page confirming that Developer 1 has invited Developer 2 and Developer 3 as official contributors with accepted statuses.

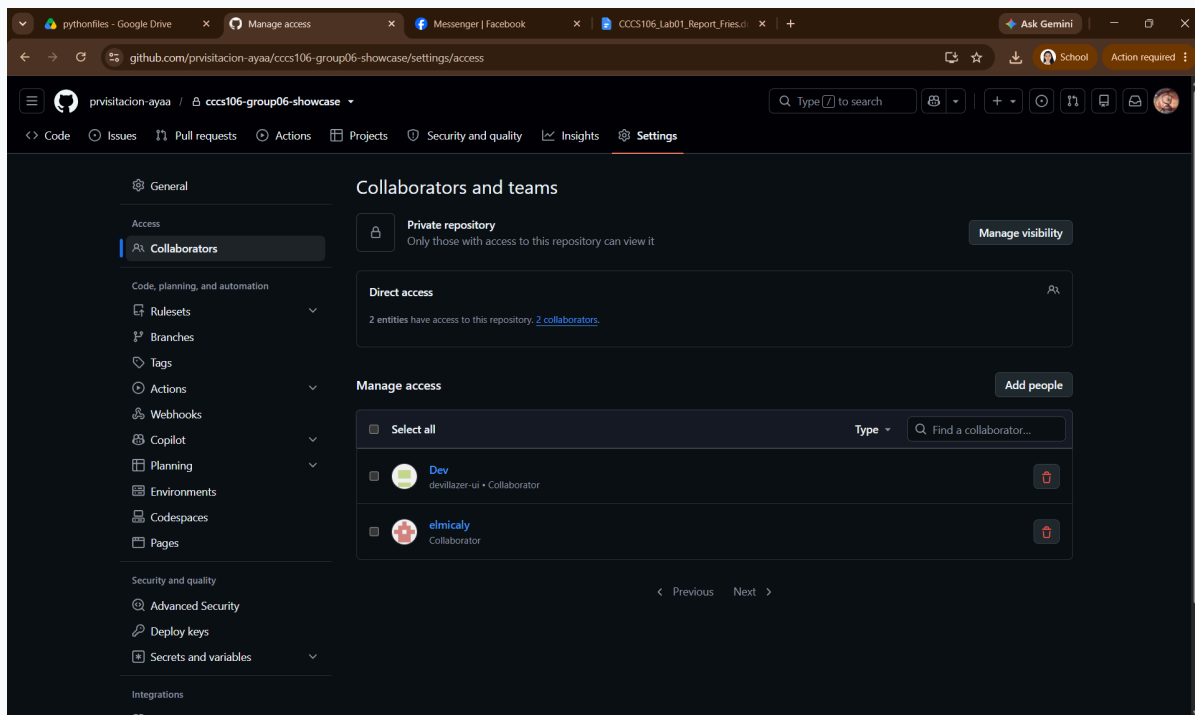

Figure 1: GitHub Collaborators Verification (Settings > Collaborators)

Section 2: Automated Pre-Flight Diagnostics Audit

Pre-flight workstation audit executed via 'python verify_setup.py' inside the active virtual environment (.venv). All six (6) audit checks must report [PASS] verifying Python 3.10+, virtualenv isolation, Flet SDK v0.86.5+, Git binary detection, configured institutional user identity, and .gitignore hygiene.

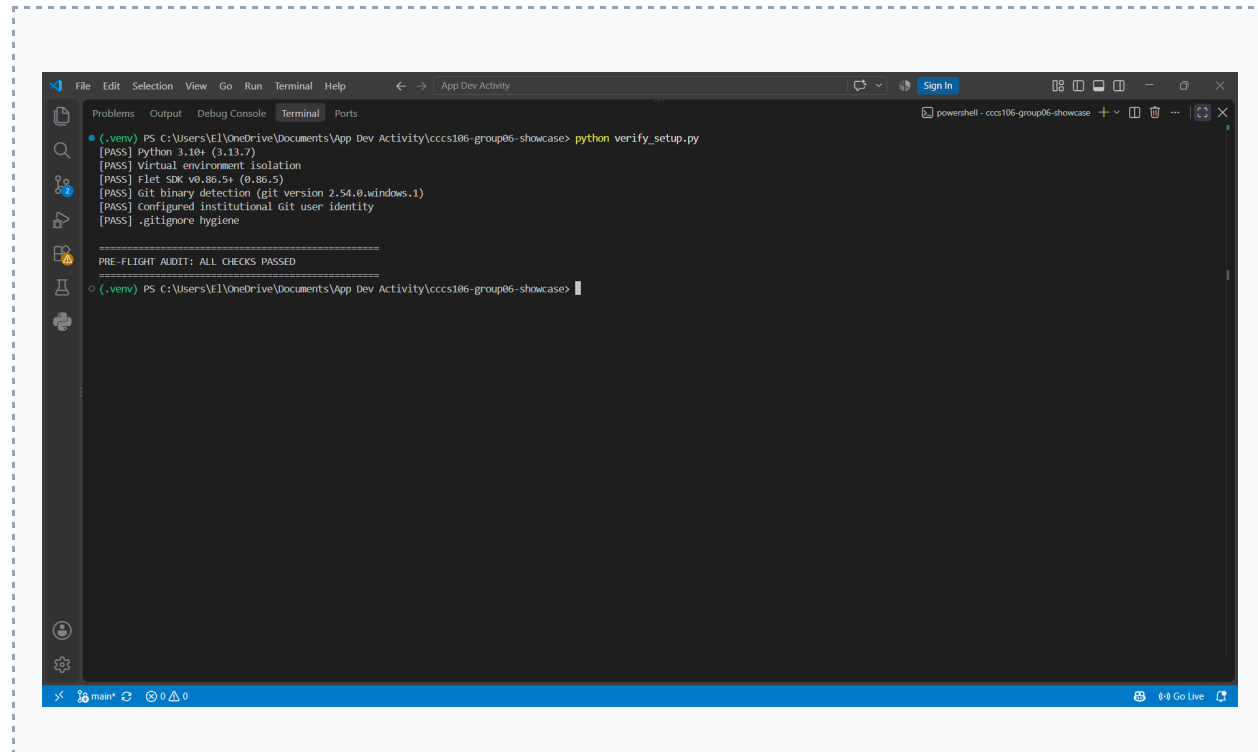

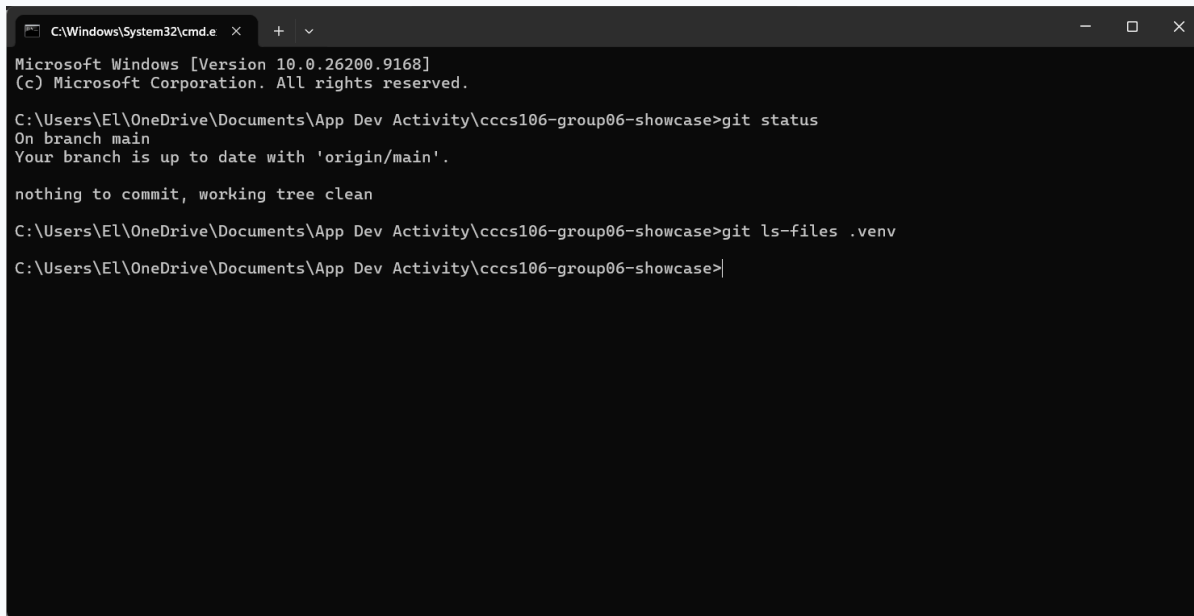

Figure 2: Pre-flight Environment Diagnostics Audit (verify_setup.py)

Section 3: Git Working Tree Cleanliness & .gitignore Audit

Demonstration of repository hygiene. The screenshot proves that the working tree is clean with zero uncommitted changes, and that .venv/ is completely untracked (verified by running 'git ls-files .venv', returning empty output).

A screenshot of a Windows Command Prompt window. The title bar shows 'C:\Windows\System32\cmd.exe' and standard window controls. The command prompt displays the following text:

```
Microsoft Windows [Version 10.0.26200.9168]  
(c) Microsoft Corporation. All rights reserved.  
  
C:\Users\El\OneDrive\Documents\App Dev Activity\cccs106-group06-showcase>git status  
On branch main  
Your branch is up to date with 'origin/main'.  
  
nothing to commit, working tree clean  
  
C:\Users\El\OneDrive\Documents\App Dev Activity\cccs106-group06-showcase>git ls-files .env  
C:\Users\El\OneDrive\Documents\App Dev Activity\cccs106-group06-showcase>
```

Figure 3: Git Working Tree Cleanliness & .gitignore Hygiene Proof

Section 4: Running Flet v0.86.5 Application Showcase

Desktop window screenshots demonstrating the running collaborative Flet GUI application across its three core interactive states: Initial Launch, Sprint Goal Milestone Reached, and Dark Mode theme toggle.

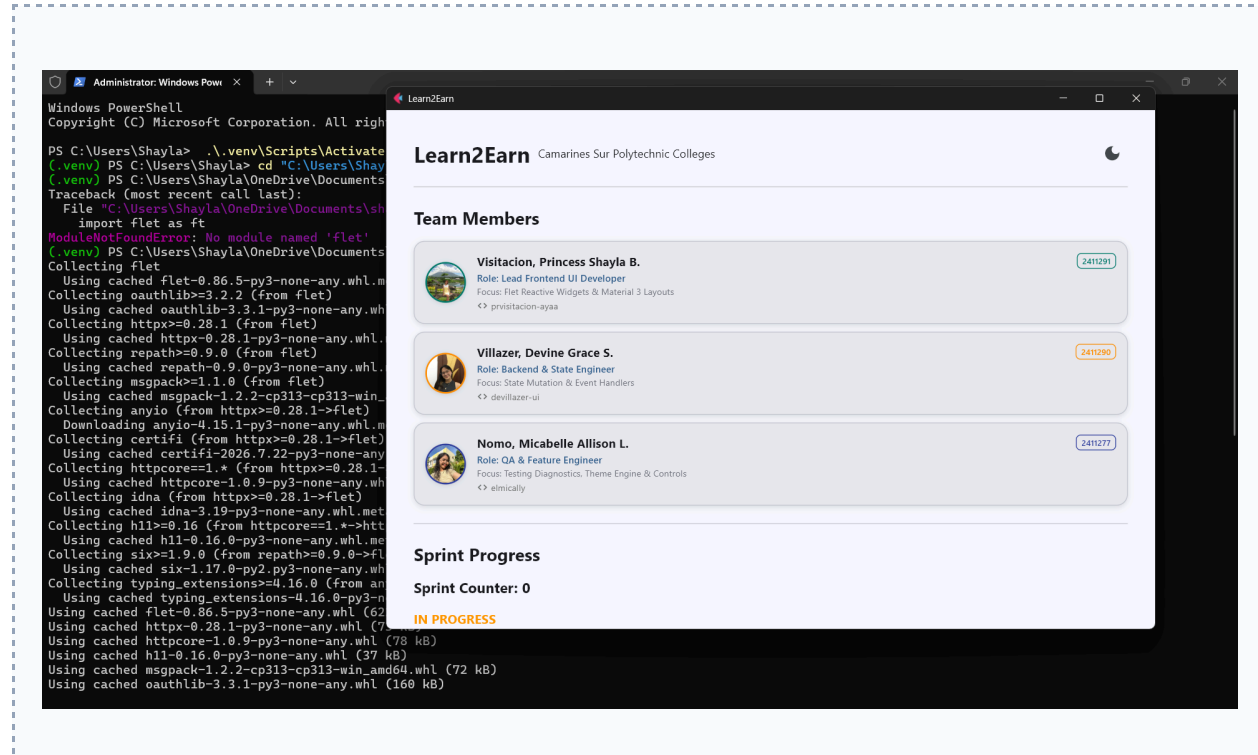

Figure 4: Application Initial Launch State

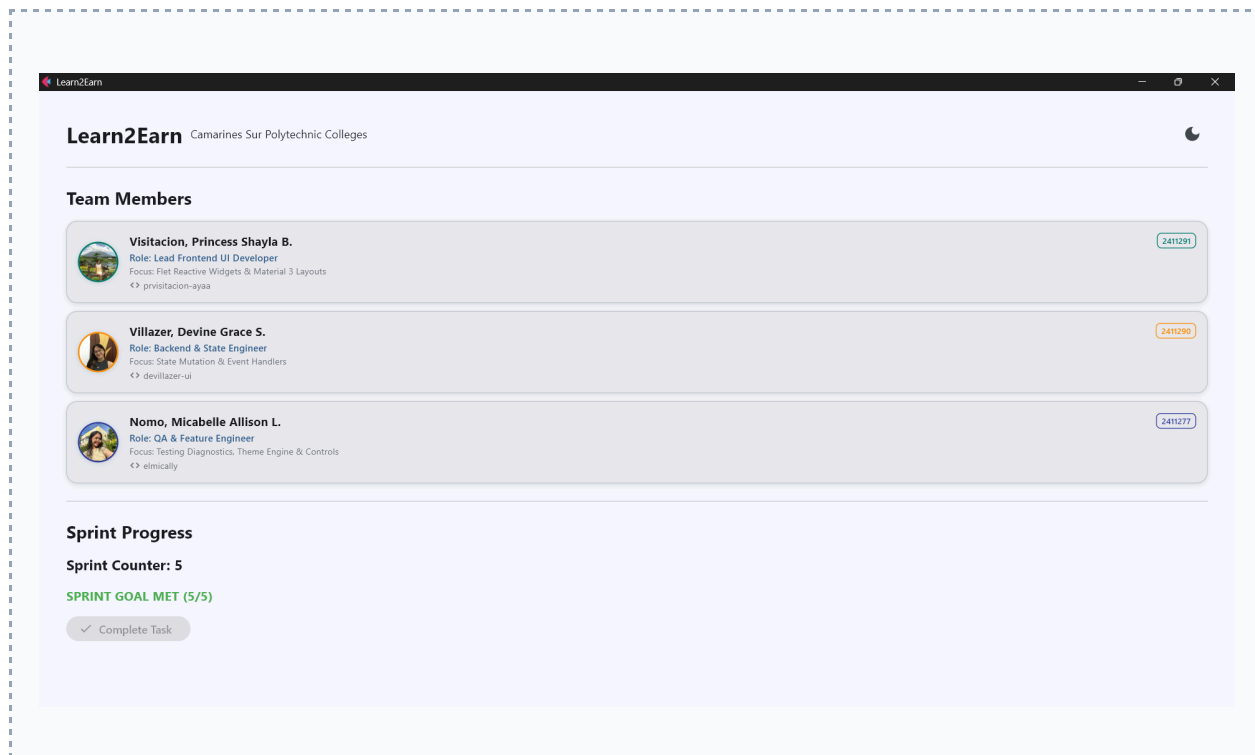

Figure 5: Sprint Goal Milestone Reached State

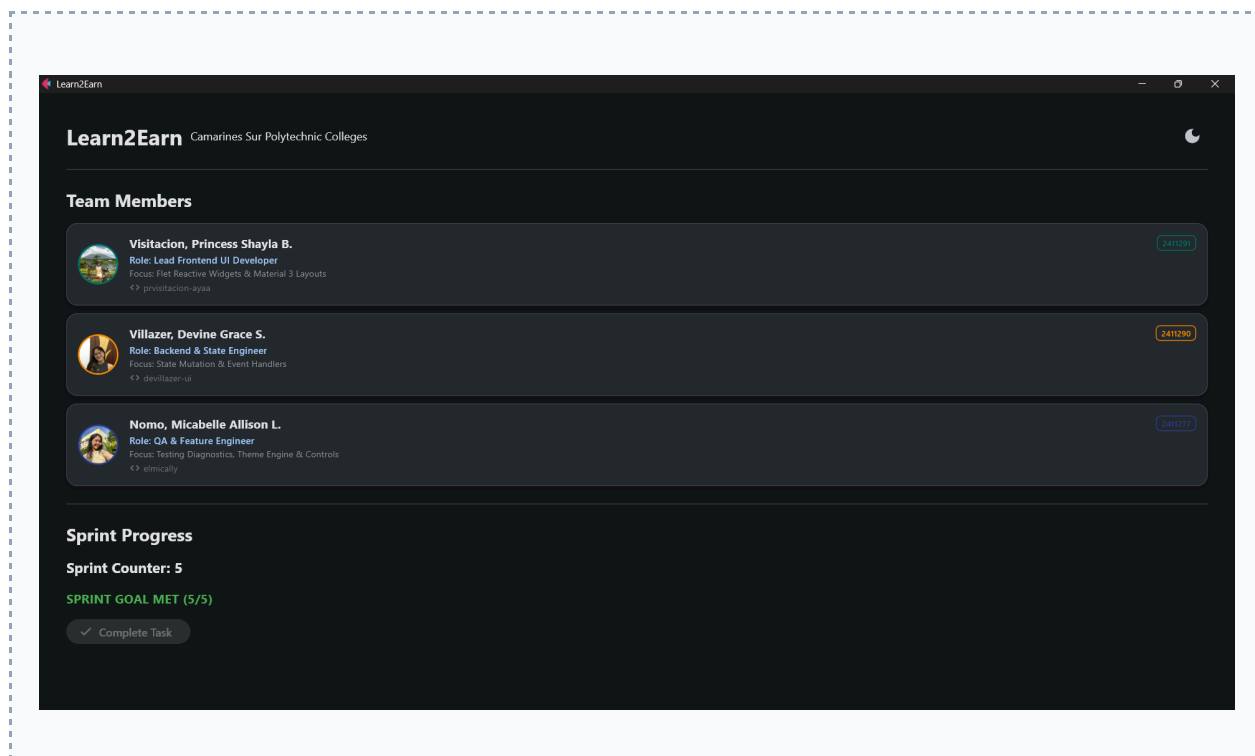

Figure 6: Material 3 Dark Mode Theme Toggle State

Section 5: Triad Contribution Matrix & Learning Reflections

Summary of individual contributions and commit accountability across all three triad developers.

Member Name	Role	Branch Name	Commit SHA	Specific Engineering Contributions
Visitacion, Princess Shayla B.	Developer 1 (Lead UI)	feature/dev1-ui	b5c7d2b	Initialized repo, setup .gitignore, integrated card 1, configured remote repo & pushed main.
Villazer, Devine Grace S.	Developer 2 (State Logic)	feature/dev2-state	c9c8635	Synced main, integrated card 2, connected increment/reset event handlers, merged & pushed.
Nomo, Micabelle Allison L.	Developer 3 (QA/Feature)	feature/dev3-features	2e264ad	Synced main, integrated card 3, built milestone badge logic & boundary constraints, merged & pushed.

Individual Technical Reflections

Developer 1 (Lead UI & Repo Architect):

While working as Lead UI & Repo Architect, I came to understand that virtual environments can keep projects from conflicting, as they isolate project dependencies. I also learned that I should not upload to GitHub any files that have the extensions: ".venv", cache files, and other unnecessary or sensitive files. Finally, I learned that GitHub repository invitations must be discussed with fellow team members to ensure everyone is given the appropriate access to the project and can help contribute.

Developer 2 (State & Event Logic Engineer):

I learned how to make a clone of a remote repository so that I can work on the project efficiently without having to clone it every single time. I also learned how to sync my local repository with the changes from the upstream repository using 'git pull origin main', so that my code remains up to date with the changes made on the main branch. I learned how the system can automatically react to user actions and state changes when implementing reactive event handlers. These skills helped me understand the collaboration between version control and event-driven logic in the development and maintaining an interactive application.

Developer 3 (QA & Sprint Goal Feature Engineer):

I learned that feature branching helps keep our work safe and separate from the main project. I also learned that state boundary constraints prevent values from going beyond their allowed limits. Lastly, I learned that testing Material 3 controls in Flet helps make sure the buttons and other UI controls work correctly.

Appendix: Verbatim Git Commit Tree Log

Verbatim ASCII commit history exported using 'git log --oneline --graph --all > git_log_proof.txt'. This demonstrates the complete sequential feature branching and merge timeline across all three developers.

```
* fdelf45 (HEAD -> feature/dev3-features, origin/feature/dev3-features) docs: update git
log proof
* 27elf07 Merge remote-tracking branch 'origin/main' into feature/dev3-features
|\
| * f7a74d0 (origin/main, origin/feature/dev2-state, origin/HEAD) Merge main into
feature/dev2-state
| |\
| * | c9c8635 Implement state logic
* | | 09481b5 log proof
| | /
| | /
| | * e917f86 (origin/feature/dev1-ui) Merge branch 'main' into feature/dev1-ui
| | |\
| | | /
| | | /
| | | |
* | | 5992112 (main) test: configure project environment and pytest
* | | 2e264ad test: set up pytest testing framework
* | | e73d4e6 Update README.md
* | | ed271ab Update README to include software requirements
* | | 49515ba Revise README for clarity and detail
* | | 6db6078 Update team_profiles.py
* | | 1b6d01f Update main.py
* | | 67c663e Update team_profiles.py
* | | cba756f Update README.md
